

Manufacturing Alliance of Chester County and Delaware County (MACC/DC) Resource Guide

About MACC/DC

The MACC/DC promotes the growth of the manufacturing industry by providing workforce and economic development services to partnering companies. We achieve this by helping manufacturers enhance growth and prosperity through attracting and retaining new talent as well as skills training; building networks that help access best practices, training, and information; enhancing community awareness of the value and opportunities that manufacturing provides and developing additional value-added services for manufacturers.

Key Initiatives Include:

MANUFACTURER TO MANUFACTURER – Creating and enhancing connections among manufacturers to share best practices, build local supply chains, develop cooperative procurement, assist with temporary capacity constraints, and hire and train the right people.

TRAINING – provide manufacturing-related training to member employees, secure training grants for members, develop customized training to meet the needs of manufacturers at convenient times and locations

YOUTH/ PIPELINE DEVELOPMENT – Understand potential sources of manufacturing employees and develop programs to create interest in pursuing a manufacturing career or changing careers to pursue opportunities in manufacturing; create resources to educate students, parents, advisors and potential job changers on the positive aspects of pursuing a career in manufacturing

MARKETING – creating and sustaining approaches that will increase membership by showcasing the value added from MACC/DC membership

One of our key strategies to meet the above vision is to become the ‘Go-To’ resource for manufacturers in our counties, providing information and resources of common interest to manufacturers: shared solutions for growth and risk management

This Resource Guide will support this strategy by becoming an efficient, growing and reliable source for our partners that will:

- be focused on common issues important to manufacturers,
- provide information to busy manufacturers to help understand and access fragmented public and private resources to support manufacturers' objectives,
- identify opportunities for partners to cooperate to share best practices, leverage influence, and address common needs
